

CHANGE THE WAY **YOU ROLL**™

DESCENDING LOFT  
**DLT**  
TECHNOLOGY

AVAILABLE NOW AT GOLF SHAFTS ASIA

**DLT (DESCENDING LOFT TECHNOLOGY™) WORKS TO LAUNCH THE GOLF BALL AT A CONSISTENT ANGLE WHICH IN TURN LEADS TO THE MOST CONSISTENT DISTANCE CONTROL OF ANY PUTTER ON THE MARKET.**

**SIK PUTTERS ARE PROVEN WINNERS ON THE PGA TOUR & SIK DO NOT PAY TO PLAY. SIK IS USED ON TOUR BECAUSE DLT HELPS PLAYERS SCORE.**

**SIK DO NOT CUT CORNERS IN PRODUCTION; THEIR PUTTERS ARE 100% CNC MILLED FROM 303 STAINLESS STEEL BARS. SO EVERY PUTTER WE MAKE IS THE SAME AS THEY USE ON TOUR.**

Descending Angle 1.5° Launch

Ascending Angle 1.5° Launch

Neutral Angle 1.5° Launch

## The Problem?

NOBODY can match the shaft angle from address to impact at any consistent rate. This leads to inconsistent launch angles, which result in poor distance control.

## The Solution?

**Descending Loft Technology™**. DLT delivers consistent launch angles regardless of shaft lean at impact which leads to more consistent and predictable rolls.
